

Bijuga + wheels

The **Bijuga** is a robust CorTen steel outdoor stove. The striking timeless design combines tight lines and surfaces with industrial accents.

The sheet material is folded out on the connecting seams and all bolts and nuts are visible.

The hardwood merbau parts (knobs and push-bar) not only provide beautiful details but are also very practical for operation because they do not get too hot.

At the backside it has 4 extra air inlets, this air ends up in the airspoiler that is positioned at the inside just above the glass. It will create a natural air layer to keep the glass clean.

The 2-wheel version with a push-bar on the rear can easily be moved. The emblem on the hood is a symbol for the collaboration with Atelier Rene Knip, the designer of this stove.

Design Studio Rene Knip

The design is from Atelier Rene Knip. Rene has a distinctive view on stoves. The user and the function of the fireplace are central.

His designs have a distinct design and are characterized by balanced proportions in size, a beautiful look and the use of high-quality materials and beautiful details.
